## SUMMARY

Software Engineer Intern in YugaYatra Retail (OPC) Private Limited with hands-on experience building and shipping production-ready applications using **React, Next.js, Node.js, PostgreSQL, and Supabase** in a microservices-based environment. Shipped features improving page load time by 30% and code efficiency by 25%, while maintaining 98% uptime using CI/CD on Vercel and Render. Built two independent full-stack products end-to-end – a MERN-based SaaS SOP generator and a Manifest V3 Chrome extension – combining secure authentication, API integration, and AI-assisted tooling.

## EDUCATION

### DAV PG College

*B.Sc. in Information Technology, CGPA: 7.1/10*

Dehradun, Uttarakhand

*Sep 2023 – Aug 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Web Technologies, Internet of Things

## EXPERIENCE

### Software Engineer Intern

*YugaYatra Retail (OPC) Private Limited*

August 2026 – Present

*Remote*

- Contributing to web platforms across e-commerce, PropTech, and matchmaking verticals using React, Next.js, and Node.js within a microservices-based engineering team
- Shipping full-stack features involving PostgreSQL, Supabase, and Razorpay payment integration
- Implementing JWT-based authentication and authorization to secure client-facing data
- Using AI-assisted development tools (Google Antigravity) alongside Supabase for backend data management and authentication to speed up feature delivery

## PROJECTS

### Explain This Diff — Chrome Extension | *JS, Manifest V3, Node.js, Express, Groq AI*

March 2026

- Built a Manifest V3 Chrome extension that injects an AI-generated summary button into GitHub pull request pages, using content scripts and DOM traversal to extract diff content in real time
- Designed a secure Express backend proxy for all Groq API calls, eliminating client-side key exposure, and implemented SHA-256 response caching to reduce redundant calls and latency on repeat requests
- Engineered fallback DOM selector logic to handle inconsistencies across GitHub's page templates, using MutationObserver to sustain functionality through single-page-app navigation without reloads

### AI-Powered SOP Generator | *React, Node.js, Express, MongoDB, Zustand, Gemini AI*

January 2026

- Built and deployed a full-stack MERN SaaS application that converts raw process descriptions into structured, professional SOPs using the Gemini AI API
- Implemented JWT authentication and a multi-tenant workspace architecture, with Express middleware handling request validation and SOP search/filtering
- Built one-click PDF export using PDFKit, with Zustand managing global state for a responsive UI
- Deployed via CI/CD to Vercel (frontend) and Render (backend), with MongoDB Atlas as the production data layer

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript

**Frontend:** React.js, Next.js, Tailwind CSS, Shadcn UI, React Router, Zustand

**Backend & APIs:** Node.js, Express.js, RESTful API Design, Middleware, Authentication & Authorization (JWT), Application Security

**Databases:** MongoDB, PostgreSQL, Supabase

**DevOps & Tools:** Git/GitHub, CI/CD, Vercel, Render, Postman

**AI-Assisted Development:** Gemini AI, Groq AI, Google Antigravity

## CERTIFICATIONS

Web Design — freeCodeCamp

Frontend Developer — Zetheta Algorithms Private Limited

Technology Software Development Job Simulation — Citi (via Forage), July 2026
