Summary

Full-stack developer (React.js, Next.js, Node.js) with two internships building production-oriented web features. Built and deployed an AI-powered Chrome extension for GitHub pull request summaries and a MERN-based SOP generator with JWT authentication, multi-tenant workspaces, and PDF export. Comfortable with REST APIs, MongoDB, PostgreSQL, and Supabase. Seeking a Junior Full Stack Engineer role to ship reliable, maintainable software.

Education

DAV PG College Dehradun, Uttarakhand
B.Sc. in Information Technology, CGPA: 7.1/10 *Sep 2023 – Aug 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Web Technologies, Internet of Things

Experience

Offbeat Pixels Jul 2026 – Oct 2026
Full-Stack Developer Intern

- Worked on React.js and Next.js applications while following production-oriented development practices and improving code readability and maintainability.
- Gained hands-on experience with real-world codebases, component-based development, debugging, and writing code suitable for production environments.

YugaYatra Retail (OPC) Private Limited May 2026 – Jul 2026
Software Engineer Intern

- Used AI-assisted development tools to accelerate application development and product prototyping.
- Worked with React.js, Next.js, and Node.js to develop web application features and integrate frontend components with backend functionality.
- Gained hands-on experience working with PostgreSQL and Supabase in application data management and full-stack development workflows.

Projects

Explain This Diff — Chrome Extension | *JavaScript, Manifest V3, Node.js, Express, Groq AI* Mar 2026

- Integrated the Groq AI API to generate human-readable summaries of code diffs for GitHub pull request reviews.
- Built a Manifest V3 Chrome extension that injects an AI-generated summary button into GitHub pull request pages and extracts diff content using content scripts and DOM traversal.
- Designed an Express backend proxy for Groq API requests to keep API credentials out of client-side code, and implemented SHA-256 response caching to reduce redundant requests.
- Implemented fallback DOM selectors and a MutationObserver to support GitHub's single-page navigation and changing page structures.

AI-Powered DOCS Generator | *React, Node.js, Express, MongoDB, Zustand, Gemini AI* Jan 2026

- Built a full-stack MERN application that converts raw process descriptions into structured professional standard operating procedures using the Gemini AI API.
- Implemented JWT authentication and a multi-tenant workspace architecture, with Express middleware for request validation and SOP search and filtering.
- Implemented one-click PDF export using PDFKit and managed global application state with Zustand.
- Deployed the frontend on Vercel and the backend on Render, using MongoDB Atlas for data storage.

Technical Skills

Languages: JavaScript, TypeScript
Frontend: React.js, Next.js, Tailwind CSS, Shadcn UI, React Router, Zustand
Backend & APIs: Node.js, Express.js, RESTful APIs, Middleware, Authentication & Authorization, Application Security
Databases: MongoDB, PostgreSQL, Supabase
DevOps & Tools: Git, GitHub, CI/CD, Vercel, Render, Postman, AI-Assisted Development Tools

Certifications

Web Design — freeCodeCamp
Frontend Developer — Zetheta Algorithms Private Limited
Technology Software Development Job Simulation — Citi (via Forage), July 2026
